Description:

With allergy problems reaching alarming, epidemic levels, horticulturist Tom Ogren sets out to investigate the role that urban landscaping plays in this urgent health crisis. What he discovered was startling: The vastly disproportionate cultivation of all-male plant varieties produces large amounts of intensely irritating airborne pollen. This extensively researched, comprehensive, plant-by-plant reference alerts gardeners and helps them make landscaping choices that can drastically reduce their exposure to harmful allergens. Complete with alphabetical entries of basic planting information, growing zones, and allergy ratings.

I love this book! It had a lot of great info for any gardener that suffers from pollen allergies (or cares about family and friends who may be suffering). I just wish that the index of plants was more extensive but I understand this would be very hard to do without getting huge and cumbersome. It does, however, give you tips on how to make smarter choices when selecting plants that was very helpful! Definitely worth the cost and I will keep this book around for a very long time for reference.
